

Dr. Marko Ahonen

BIOGRAPHY

Graduated from Helsinki University 2011. Advanced trainer and lecturer for digital dentistry with over 500 hours of lecturing nationally and internationally. Owner and founder of private dental clinic Huippu. Main professional focus on bite reconstructions and guided implants.

COURSE DESCRIPTION

Most dental implants are planned based on 2D image and placed free-handed even though it has been shown that Cone beam computed tomography (CBCT) guided approach would be beneficial. Traditional modalities to fabricate guides are laborious and they increase overall cost of dental implant significantly.

The objective of this lecture is to show digital tools, which can be used to efficiently diagnose, design and treat complex cases. This lecture will also show the workflow of a fully digital CEREC guide, clinical cases with CEREC guides, and finally how the guide can be used in a wide variety of clinical situations including early and immediate implantations.
